

Abstract of the Disclosure

According to one embodiment of the invention, a cellular telephone includes a memory and a transmitter. The memory is adapted to store a telephone number associated with an incoming telephone call, and the transmitter is adapted to transmit the telephone number to another telephone. The cellular telephone may also include a receiver and a calling unit. The receiver is adapted to receive a different telephone number from the another telephone, and the calling unit is adapted to place an outgoing telephone call to the different telephone number. In an alternative embodiment, a method of placing a telephone call from a telephone includes the steps of receiving, over a wireless link, call related information from another telephone, and placing an outgoing call based on the call related information. The other telephone may be a cellular telephone, and the call related information may include a telephone number associated with a telephone call previously received by the other telephone.
